PROJECTS

Spokespiel - Social Chatting Service:

Spokenspiel is a social chatting service created to allow users to add friends and send messages to each other. Built in React and Redux, the instant messaging is handled by SocketIO and permanently stored through MongoDB.

Pokedexer - Pokemon Database Searcher:

Pokedexer is a RESTful website that accesses a public API to display Pokemon information for users. This website was built in React to explore retrieving information from an API.

Journaler — Social Journal:

Journaler is a website used to make posts about current challenges or victories in my journey as a web developer. Journaler was built in HTML and CSS while also making use of MongoDB to store information and EJS to display the information.
